Forward Solutions *(Mar 2015 – Jun 2016)*

- *Full Stack developer*
- Used PHP and jQuery to develop different kinds of websites such as private company websites, government websites and some ecommerce websites. Codeigniter, Pyrocms and GoCart frameworks are used.

Personal Projects:

Polytopia Battle Calculator *(https://calc.polytopia.win)*

- A simple app for players of a strategy game called "The Battle of Polytopia" that helps them in planning their moves

Angular Mocker *(https://www.npmjs.com/package/angular-mocker)*

- Command line tool that automates creation of mock classes for component, services and pipes.
- We used it on my first project in Manulife, wherein the existing project does not have unit testing implemented. We used the tool to ease our mocking of dependencies to accelerate our catching up with unit tests.
